

Welcome, BICSc members!

BENEFITS

FOR BICSc

THE BRITISH INSTITUTE OF CLEANING SCIENCE

The BDMA is the accreditation body for damage management professionals, setting standards and providing training and accreditation for practitioners and others across the wider insurance industry who are involved in the recovery and restoration of damaged properties.

**We are pleased to offer all BICSc members
FREE and discounted BDMA e-Learning courses!
See details below -**

FREE ONLINE COURSES

Supporting Children and Young People after Flooding

This course has been developed based on research carried out by Lancaster University in conjunction with Save the Children and the Economic & Social Research Council.

The objective of the course is to provide case studies to assist in the understanding of the day to day issues faced by children and young people during what is often a long and isolating recovery period enabling those in contact with the families to provide the right support.

Water Damage Management: an overview

This course focuses on the high level activities carried out by the damage management and restoration industries acting as part of the insurance industry supply chain. It provides information on some key principles that can be used to define the most appropriate solution dependent on the circumstances of the claim.

An Introduction to the BDMA

This course contains information about the formation of the BDMA and its history, key milestones, and about the BDMA code of practice.

BS12999 - Overview of the Damage Management Code of Practice

An overview of the code of practice for the organisation and management of the stabilisation, mitigation and restoration of properties, contents, facilities and assets following incident damage.

The Flood Recovery Process: understanding people's everyday realities

This course uses case studies to examine the impacts of flooding on people and what their experiences can teach us about supporting people when they are experiencing a traumatic event.

The BDMA Standard Overview

This course contains an overview of the BDMA standards that identify the essential minimum procedures and protocols followed when dealing with incidents and perils that cause damage to residential and commercial properties.

DISCOUNTED ONLINE COURSES

The BDMA Certificate in Site Health & Safety

£204 for BICSc members

**26%
discount**

This BDMA certification combines a series of Health & Safety modules considered essential for anyone working on or attending site where there is a perceived level of complexity and risk to be considered. The courses included cover: Personal Protective Equipment, Working at Height, Asbestos Awareness, Confined Space Awareness, Manual Handling, Accident reporting, Fire Safety, Electrical Safety, Risk Assessment, Noise Awareness and Control of Substances Hazardous to Health (COSHH). Once all individual modules have been passed there is an exam testing knowledge across all the modules, which leads to acquiring the BDMA Certificate in Site Health & Safety. This module is also Part 1 of the Certificate in Commercial Damage Management.

The BDMA Certificate in Commercial Damage Management

£264 for BICSc members

This course consists of 8 mandatory modules and a final assessment. The assessment is the final step for candidates and can only be taken when the 8 individual mandatory modules have been completed successfully with an 80% pass rate. The course is designed for anyone involved in carrying out commercial damage restoration work or who wants to build their knowledge in this area.

From just £24 per course

Damage Management Training & Reference

£60 for BICSc members

**33%
discount**

The course is designed to develop an understanding of how buildings are constructed and how the utilities are organised within them; along with a working knowledge of the items that are likely to be found within the building. Additionally, the course covers basic science so that drying equipment can be correctly installed, and basic microbiology so that decontamination actions can be correctly taken when dealing with sewage spills or mould growth.
